

## **Title of your manuscript: Preparation of Manuscripts for the Journal of Management, Social Sciences and Humanities (JMSH)**

Authors – 1 Name , Authors – 2 Name

Authors – Affiliation: Dept., Name of the Organization, Acronyms Acceptable, City, Country, Email address

Authors – Affiliation: Dept., Name of the Organization, Acronyms Acceptable, City, Country, Email address

---

### **ABSTRACT**

*Please use this section for your abstract (maximum of 200 words). These instructions give you guidelines for preparing papers for the Journal of Management, Social Sciences and Humanities (JMSH). Use this document as a template when formatting your paper as an instruction set and make the compatible modifications as required. These should not alter the overall look and feel of the manuscript. The electronic file of your paper will be formatted further at the JMSH Editorial Office by its editorial board. All symbols used in the abstract should be defined by the author(s). They should not cite references in the abstract. The abstract is in Times New Roman 10-pt Italic font in a single column with 1.15 line spaces. This electronic document is a template and already defines the components of your paper [title, text, heads, etc.] in its style sheet. Do Not Use Symbols, Special Characters, or Math in the Paper Title or Abstract. When writing your abstract, it is advised to focus on including components such as purpose, methodology, findings, recommendations, and originality.*

**KEYWORDS:** *List maximum of six keywords separated with a comma in Times New Roman 10pt. Italic Capital Font*

### **1. INTRODUCTION**

The authors should provide complete information asked on the author guidelines and submissions pages of the JMSH websites. Write the introduction to your research with objectives. Define abbreviations and acronyms the first time they appear in the text.

This document is a template for the preparation of a manuscript to publish in a volume of JMSH. The template is downloadable from the website of JMSH, and the authors can use it to prepare their manuscripts. Do not change the font sizes or line spacing to squeeze more text into a limited number of pages. Use italics for emphasis; do not underline.

To insert images in Word, position the cursor at the insertion point and either use Insert | Picture | From File or copy the image to the Windows clipboard and then Edit | Paste Special | Picture (with “In-Line with the text”). The pictures and tables are preferable to be at the end of the manuscript in a separate section named ‘Figures’ and ‘Tables’ placed before “References”.

The figures and tables may be placed with the regular text also, instead of in separate sections, if it is required for better interpretation intent of the content.

The editorial team of JMSH will do the final formatting of your paper

### **2. FORMATTING MANUSCRIPT**

The authors can use this template using the font Times New Roman, at 11-pt, and 1.15 line spaces. The team reserves the right of making alterations and modifications to the template as well as the formatting of the manuscripts before publishing. Authors are requested to abide by the formatting of this template when resubmitting their selected manuscript for publishing in JMSH, failing which, the content may be rejected without considering it for review irrespective of the quality and/or relevance of the content. This document is created only for a purpose of indicating the expectation of the editorial team regarding the formatting of the content submitted for consideration for publishing. In no way is the content in this document could be considered legal or authentic or related to any rules/regulations of the journal's editorial board. Headings of this document are followed by some introduction to the content covered under them. Authors should provide relevant headings to the content of the manuscript as indicated in the author guidelines such as 1. Introduction, 2. Methodology, 3. Results, 4. Discussion, 5. Conclusion, 6. Appendices and 7. References.

## Units

Always use the International System units (SI) as primary units and English units (non metric units) as secondary units (in parentheses). Avoid combining SI and centimeter–gram– second system of units (CGS) such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally which is a variant of the metric system units. If you must use mixed units, clearly state the units for each quantity in an equation. Use zero before the decimal points. The SI unit for magnetic field strength  $H$  is A/m. However, if you wish to use units of T, you should either refer to magnetic flux density  $B$  or magnetic field strength symbolized as  $\mu_0 H$ . Use the center dot to separate compound units, e.g., “A·m<sup>2</sup> .”

## Equations

Use symbol fonts in typing the equations. Label the equations (if any) consecutively and label the symbols used in the equations. Clearly indicate the relevant positions of the equations in the manuscript.

## Tables and figures

As JMSH will do the final formatting of your paper, you do not need to position figures and tables at the top and bottom of a page. Therefore all figures, captions, and tables can be included at the end of the manuscript. Large figures and tables may be in landscape orientation. Place figure captions below the figures; place table titles above the tables. If your figure has two parts, include the labels “(a)” and “(b)” as part of the artwork. Please verify that the figures and tables you mention in the text actually exist. Please do not include captions as part of the figures. Do not put captions in “text boxes” linked to the figures. Do not put borders around the figures. Use the complete “Figure” in the caption and text referring to the figure.

Do not abbreviate “Figure” or “Table.” Tables and Figures are numbered with numerals. Colour printing of figures is available, but the cost of colour printing has to be borne by the author. Include a note with your final paper indicating that you request for colour printing. Authors should not use colour unless it is necessary for the proper interpretation of their figures. If you want reprints of your colour article, the reprint order should be submitted promptly. There are additional charges for colour reprints. Figure axis labels are often a source of confusion. Use words rather than symbols.

As an example, write the quantity “Magnetization,” or “Magnetization M,” not just “M.” Put units in parentheses. Do not label axes only with units. For example, write “Magnetization (A/m)” or “Magnetization (A m<sup>-1</sup>),” not just “A/m.” Do not label axes with a ratio of quantities and units. For example, write “Temperature (K),” not “Temperature/K.” Multipliers can be especially

confusing. Write “Magnetization (kA/m)” or “Magnetization (10<sup>3</sup> A/m).” Do not write “Magnetization (A/m) 1000” because the reader would not know whether the top axis meant 16000 A/m or 0.016 A/m. Figure labels should be legible, approximately 8 to 12 point type.

## Tables

The table to be included in JMSH manuscripts should follow the colour and border types as shown in the following example. All tables should be captioned above them with a proper description/title. Please note that the table should NOT be submitted as images. Tables should not break to the next page. Whenever including long tables which are practically impossible to present on a single page, you should place the header row at the beginning of the new page having part of the table.

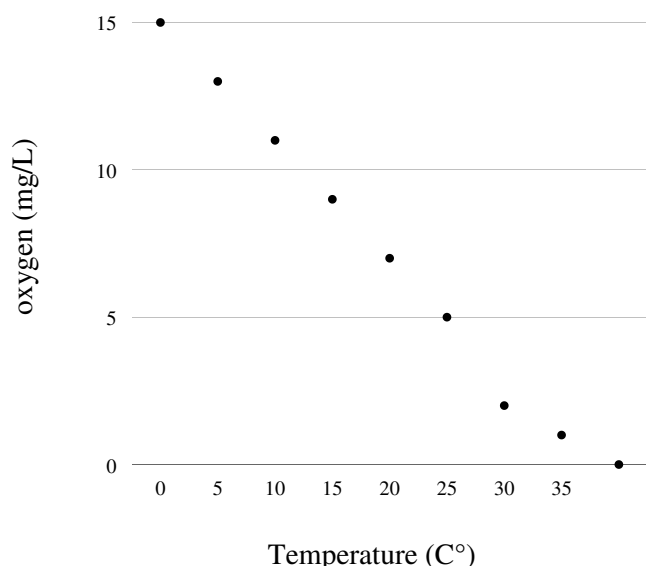

**Table 1: Summary of the selected water quality parameters in the study area**

Area	Min	Max
A	490	3980
B	360	5632
C	780	6778
D	850	7880

## Figures

Please do not embed your figures and tables in the text as the editorial board cannot extract them. (The figures and tables you insert in your document are only to help you gauge the size of your paper, for the convenience of the referees, and to make it easy for you to distribute preprints). Hence you should always submit high resolution images in the manuscript. Figure title has to appear at the bottom of the figure. All Figures including maps, photographs and plates shall be numbered in the relevant sequence and their title has to appear at the bottom.

Figures, graphics, plates, photographs and maps shall have approximately 300dpi with embedded fonts and have to be inserted in the relevant place of the text.

**Figure 1: Solubility of Oxygen with temperature**

The authors should add only those images in the manuscript which are required for the illustration of a concept described in the manuscript. They should submit, in separate files, enlarged versions of the tables and figures that need to be included in the document. The figures should be properly referenced in the text of the manuscript wherever applicable.

You will have the greatest control over the appearance of your figures if you are able to prepare electronic image files. Vector images are always preferred for maintaining the best appearance while editing. If you do not have the required computer skills, just submit high-resolution images.

### Abbreviations and Acronyms

Define abbreviations and acronyms the first time they are used in the text, even after they have already been defined in the abstract. Abbreviations used in JMSH such as SI, ac, and dc do not have to be defined. Abbreviations that incorporate periods should not have spaces: write “C.N.R.S.,” not “C. N. R. S.”. Equations Appendix

Appendices, if needed, appear before ‘References’.

## 2. REFERENCES AND FOOTNOTES

JMSH document translator cannot handle automatic endnotes in Word; therefore, type the reference list at the end of the paper using the “Harvard References” style. Number footnotes separately in superscripts (Insert | Footnote). Place the actual footnote at the bottom of the column in which it is cited; do not put footnotes in the reference list (endnotes). Use letters for table footnotes (see Table I). Reference list shall follow Harvard style. The latest version of the Harvard style could be

downloaded from the internet and some examples Harvard style are given under references in this template.

## 4. COPYEDITING

Please have your text written in good and clear English. If the reviewers judge the work as acceptable for publication, authors are required to have their manuscripts sent to independent copy editors to prevent probable grammatical or spelling issues and to conform to good scientific English.

Required changes in the formatting and settings of the manuscripts will be made by JMSH. The authors may be asked to incorporate corrections/modifications as per the review comments and a final version needs to be submitted. When submitting your final version, after the paper has been accepted, it should abide by the template formatting without fail. Send the papers electronically. The paper will again be distributed for review and editing by the Editor-in-Chief.

## 5. PROOF READING AND PUBLISHING

Editor(s), Author(s), and specialized proofreaders are included in proofreading and finalizing the manuscript for inclusion in the volume. The editor of the manuscript assigns the manuscript to a planned volume of the JMSH. Once the volume is ready, it is published online. The print version is edited and published through a separate process following the e-publishing of the volume.

To ensure timely publishing of the work, we kindly request that authors provide proof revisions within one week. All proofing instructions will be included in the email we provide to writers. We'll work towards having your content published as soon as possible.

This proof should only be used to double-check the typography, editing, completeness, and accuracy of the text, tables, and figures. Significant revisions to the article as it has been accepted for publication will be considered only with the Editor's agreement at this time.

It is critical that all corrections be returned to us in a single communication. Please double-check before responding, since any further corrections cannot be guaranteed to be included. It is totally your obligation to proofread.
